Algorithm for drawing the plex with distant thoughts

1. Create a list of thoughts to be drawn and their on screen locations:
 2. Add the central thought to the list.
 3. Add children to the list.
 4. Add parents to the list.
 5. Add jumps to the list.
 6. Add siblings to the list, checking first that they are not already on the list.
 7. Add distant of children to the list, checking first that they are not already on the list.
 8. Add distant of parents to the list, checking first that they are not already on the list.
 9. Add distant of jumps to the list, checking first that they are not already on the list.
 10. Add distant of siblings to the list, checking first that they are not already on the list.
11. Draw the lines that connect each thought:
 12. For each item in the list:
 13. Get each item in the list:
 14. If the two items are related, draw lines between them from and to the appropriate gates.
15. Draw the distant thoughts:
 16. For each item in the list:
 17. If it is a distant thought, draw it.
18. Draw the other thoughts:
 19. For each item in the list:
 20. If it is not a distant thought, draw it.

FIG. 23

line connects the method for searching thoughts

lines to find a route from nSrc to nDest other than a direct relation

returns TRUE if found

boolean Search(int nSrc, int nDest)

```
{
    //create the lists
    ThoughtList posList;    list of thoughts that possibly connect
    ThoughtList notList;    list of thought that do not connect
    //empty the lists
    posList.Initialize();
    notList.Initialize();
    //add the source to the not list since we cannot go directly to the destination
    notList.Add(nSrc);
    //since we cannot go directly to the destination,
    //add all relates except the destination to the possible list
    Thought src(nSrc);
    for(int n = 0; ; n++)
    {
        int nRel = src.GetRelate(n);
        if(!nRel)
